

SOUDAL TYPE P GREEN SOLVENT CEMENT

Soudal Pty Ltd

Version No: 2.1.1.1

Safety Data Sheet according to WHS and ADG requirements

Issue Date: **03/10/2016** Print Date: **09/12/2016** S.GHS.AUS.EN

SECTION 1 IDENTIFICATION OF THE SUBSTANCE / MIXTURE AND OF THE COMPANY / UNDERTAKING

Product Identifier

| Product name | SOUDAL TYPE P GREEN SOLVENT CEMENT | |
|-------------------------------|-------------------------------------|--|
| Synonyms | Not Available | |
| Proper shipping name | HESIVES containing flammable liquid | |
| Other means of identification | Not Available | |

Relevant identified uses of the substance or mixture and uses advised against

Relevant identified uses

Use according to manufacturer's directions.

Type P Solvent Cement for pressure joints in PVC-U Pipes and Fittings.

Details of the supplier of the safety data sheet

| Registered company name | Sodual Pty Ltd |
|-------------------------|---|
| Address | 1 Tollis Place, Seven Hill NSW 2147 Australia |
| Telephone | 1300 507 011 |
| Fax | Not Available |
| Website | www.soudal.com.au |
| Email | techsupport@soudal.com.au |

Emergency telephone number

| Association / Organisation | ot Available | |
|-----------------------------------|---|--|
| Emergency telephone numbers | 1300 507 011 (Business hours) [Menu option 3] | |
| Other emergency telephone numbers | +61 2 6807 0305 (After hours) | |

SECTION 2 HAZARDS IDENTIFICATION

Classification of the substance or mixture

| Poisons Schedule | S5 | |
|-------------------------------|--|--|
| Classification ^[1] | lammable Liquid Category 2, Acute Toxicity (Oral) Category 4, Acute Toxicity (Dermal) Category 4, Acute Toxicity (Inhalation) Category 4, Eye Irritation Category 2A, Reproductive Toxicity Category 1B, Specific target organ toxicity - single exposure Category 3 (respiratory tract irritation), Specific target organ oxicity - single exposure Category 3 (narcotic effects), Aspiration Hazard Category 1 | |
| Legend: | 1. Classification drawn from HSIS; 2. Classification drawn from EC Directive 1272/2008 - Annex VI | |

Label elements

GHS label elements

SIGNAL WORD

DANGER

Hazard statement(s)

| H225 | Highly flammable liquid and vapour. |
|------|---|
| H302 | Harmful if swallowed. |
| H312 | Harmful in contact with skin. |
| H332 | Harmful if inhaled. |
| H319 | Causes serious eye irritation. |
| H360 | May damage fertility or the unborn child. |

Page 2 of 11

Version No: 2.1.1.1

SOUDAL TYPE P GREEN SOLVENT CEMENT

Issue Date: 03/10/2016 Print Date: 09/12/2016

| H335 | May cause respiratory irritation. | | | |
|----------------------------|---|--|--|--|
| H336 | May cause drowsiness or dizziness. | | | |
| H304 | May be fatal if swallowed and enters airways. | | | |
| AUH019 | May form explosive peroxides | | | |
| AUH066 | Repeated exposure may cause skin dryness and cracking | | | |
| Precautionary statement(s) | Precautionary statement(s) Prevention | | | |
| P201 | Obtain special instructions before use. | | | |
| P210 | Keep away from heat/sparks/open flames/hot surfaces No smoking. | | | |
| P271 | Use only outdoors or in a well-ventilated area. | | | |
| P281 | Use personal protective equipment as required. | | | |
| Precautionary statement(s) | Response | | | |
| P301+P310 | IF SWALLOWED: Immediately call a POISON CENTER or doctor/physician. | | | |
| P308+P313 | IF exposed or concerned: Get medical advice/attention. | | | |
| P331 | Do NOT induce vomiting. | | | |
| P363 | Wash contaminated clothing before reuse. | | | |

Precautionary statement(s) Storage

| P403+P235 | Store in a well-ventilated place. Keep cool. | |
|-----------|--|--|
| P405 | Store locked up. | |

Precautionary statement(s) Disposal

P501

Dispose of contents/container in accordance with local regulations.

SECTION 3 COMPOSITION / INFORMATION ON INGREDIENTS

Substances

See section below for composition of Mixtures

Mixtures

| CAS No | %[weight] | Name | | |
|----------|-----------|--|--|--|
| 78-93-3 | 10-30 | methyl ethyl ketone | | |
| 108-94-1 | 10-30 | cyclohexanone | | |
| 109-99-9 | 10-30 | <u>tetrahydrofuran</u> | | |
| 872-50-4 | <5 | N-methyl-2-pyrrolidone | | |
| | balance | Ingredients determined not to be hazardous | | |

SECTION 4 FIRST AID MEASURES

Description of first aid measures

| Eye Contact | If this product comes in contact with the eyes: Wash out immediately with fresh running water. Ensure complete irrigation of the eye by keeping eyelids apart and away from eye and moving the eyelids by occasionally lifting the upper and lower lids. Seek medical attention without delay; if pain persists or recurs seek medical attention. Removal of contact lenses after an eye injury should only be undertaken by skilled personnel. |
|--------------|---|
| Skin Contact | If skin contact occurs: Immediately remove all contaminated clothing, including footwear. Flush skin and hair with running water (and soap if available). Seek medical attention in event of irritation. |
| Inhalation | If furnes or combustion products are inhaled remove from contaminated area. Lay patient down. Keep warm and rested. Prostheses such as false teeth, which may block airway, should be removed, where possible, prior to initiating first aid procedures. Apply artificial respiration if not breathing, preferably with a demand valve resuscitator, bag-valve mask device, or pocket mask as trained. Perform CPR if necessary. Transport to hospital, or doctor, without delay. |
| Ingestion | If swallowed do NOT induce vomiting. If vomiting occurs, lean patient forward or place on left side (head-down position, if possible) to maintain open airway and prevent aspiration. Observe the patient carefully. Never give liquid to a person showing signs of being sleepy or with reduced awareness; i.e. becoming unconscious. Give water to rinse out mouth, then provide liquid slowly and as much as casualty can comfortably drink. Seek medical advice. Avoid giving milk or oils. Avoid giving alcohol. If spontaneous vomiting appears imminent or occurs, hold patient's head down, lower than their hips to help avoid possible aspiration of vomitus. |

Indication of any immediate medical attention and special treatment needed

Page 3 of 11 Issue Date: 03/10/2016 Version No. 2.1.1.1 Print Date: 09/12/2016

SOUDAL TYPE P GREEN SOLVENT CEMENT

necessary to evacuate the stomach contents; these include gastric layage after endotracheal intubation. If spontaneous vomiting has occurred after ingestion, the patient should be monitored for difficult breathing, as adverse effects of aspiration into the lungs may be delayed up to 48 hours.

Treat symptomatically.

for simple ketones:

BASIC TREATMENT

- Establish a patent airway with suction where necessary.
- Watch for signs of respiratory insufficiency and assist ventilation as necessary
- ▶ Administer oxygen by non-rebreather mask at 10 to 15 l/min.
- Monitor and treat, where necessary, for pulmonary oedema.
- Monitor and treat, where necessary, for shock.
- PO NOT use emetics. Where ingestion is suspected rinse mouth and give up to 200 ml water (5mL/kg recommended) for dilution where patient is able to swallow, has a strong gag reflex and does not drool.
- ▶ Give activated charcoal.

ADVANCED TREATMENT

- ▶ Consider orotracheal or nasotracheal intubation for airway control in unconscious patient or where respiratory arrest has occurred.
- Consider intubation at first sign of upper airway obstruction resulting from oedema.
- ▶ Positive-pressure ventilation using a bag-valve mask might be of use
- Monitor and treat, where necessary, for arrhythmias.
- Start an IV D5W TKO. If signs of hypovolaemia are present use lactated Ringers solution. Fluid overload might create complications.
- Drug therapy should be considered for pulmonary oedema.
- ▶ Hypotension with signs of hypovolaemia requires the cautious administration of fluids. Fluid overload might create complications.
- Treat seizures with diazepam.
- Proparacaine hydrochloride should be used to assist eye irrigation.

EMERGENCY DEPARTMENT

- Laboratory analysis of complete blood count, serum electrolytes, BUN, creatinine, glucose, urinalysis, baseline for serum aminotransferases (ALT and AST), calcium, phosphorus and magnesium, may assist in establishing a treatment regime. Other useful analyses include anion and osmolar gaps, arterial blood gases (ABGs), chest radiographs and electrocardiograph.
- Positive end-expiratory pressure (PEEP)-assisted ventilation may be required for acute parenchymal injury or adult respiratory distress syndrome.
- Consult a toxicologist as necessary.

BRONSTEIN, A.C. and CURRANCE, P.L.

EMERGENCY CARE FOR HAZARDOUS MATERIALS EXPOSURE: 2nd Ed. 1994

SECTION 5 FIREFIGHTING MEASURES

Extinguishing media

- Alcohol stable foam.
- Dry chemical powder
- ▶ BCF (where regulations permit).
- Carbon dioxide.

Special hazards arising from the substrate or mixture

Advice for firefighters

| Fire Fighting | Alert Fire Brigade and tell them location and nature of hazard. May be violently or explosively reactive. Wear breathing apparatus plus protective gloves in the event of a fire. Prevent, by any means available, spillage from entering drains or water course. |
|-----------------------|---|
| Fire/Explosion Hazard | Liquid and vapour are highly flammable. Severe fire hazard when exposed to heat, flame and/or oxidisers. Vapour may travel a considerable distance to source of ignition. Heating may cause expansion or decomposition leading to violent rupture of containers. Combustion products include: carbon dioxide (CO2) nitrogen oxides (NOx) other pyrolysis products typical of burning organic material. WARNING: Long standing in contact with air and light may result in the formation of potentially explosive peroxides. |
| HAZCHEM | •3YE |

SECTION 6 ACCIDENTAL RELEASE MEASURES

Personal precautions, protective equipment and emergency procedures

See section 8

Environmental precautions

See section 12

Methods and material for containment and cleaning up

Minor Spills

- Remove all ignition sources.
- ▶ Clean up all spills immediately.
- Avoid breathing vapours and contact with skin and eyes.
- ▶ Control personal contact with the substance, by using protective equipment.

Page **4** of **11**

Version No. 2.1.1.1

SODUAL TYPE P GREEN SOLVENT CEMENT

Issue Date: **03/10/2016**Print Date: **09/12/2016**

Major Spills

- Clear area of personnel and move upwind.
- Alert Fire Brigade and tell them location and nature of hazard.
- May be violently or explosively reactive.
- ▶ Wear breathing apparatus plus protective gloves.

Personal Protective Equipment advice is contained in Section 8 of the SDS.

SECTION 7 HANDLING AND STORAGE

Precautions for safe handling

Containers, even those that have been emptied, may contain explosive vapours.

Do NOT cut, drill, grind, weld or perform similar operations on or near containers.

May form explosive peroxides on standing or following concentration by distillation.

Review of stocks and testing for peroxide content by given tested procedures at 3-monthly intervals is recommended, together with safe disposal of peroxidic samples.

Safe handling [Peroxide-containing residues can often be rendered innocuous by pouring into an excess of sodium carbonate solution]

DO NOT allow clothing wet with material to stay in contact with skin

Avoid all personal contact, including inhalation.

Wear protective clothing when risk of exposure occurs

Use in a well-ventilated area.

Prevent concentration in hollows and sumps.

Other information

Store in original containers in approved flame-proof area. No smoking, naked lights, heat or ignition sources.

DO NOT store in pits, depressions, basements or areas where vapours may be trapped

Keep containers securely sealed.

Conditions for safe storage, including any incompatibilities

Packing as supplied by manufacturer.

Plastic containers may only be used if approved for flammable liquid.

Check that containers are clearly labelled and free from leaks.

Suitable container

Suitable con

For materials with a viscosity of at least 2680 cSt. (23 deg. C) For manufactured product having a viscosity of at least 250 cSt.

Storage incompatibility

Avoid strong acids, bases. Avoid reaction with oxidising agents

SECTION 8 EXPOSURE CONTROLS / PERSONAL PROTECTION

Control parameters

OCCUPATIONAL EXPOSURE LIMITS (OEL)

INGREDIENT DATA

| Source | Ingredient | Material name | TWA | STEL | Peak | Notes |
|------------------------------|------------------------|---------------------------|---------------------|---------------------|---------------|---------------|
| Australia Exposure Standards | methyl ethyl ketone | Methyl ethyl ketone (MEK) | 445 mg/m3 / 150 ppm | 890 mg/m3 / 300 ppm | Not Available | Not Available |
| Australia Exposure Standards | cyclohexanone | Cyclohexanone | 100 mg/m3 / 25 ppm | Not Available | Not Available | Sk |
| Australia Exposure Standards | tetrahydrofuran | Tetrahydrofuran | 295 mg/m3 / 100 ppm | Not Available | Not Available | Sk |
| Australia Exposure Standards | N-methyl-2-pyrrolidone | 1-Methyl-2-pyrrolidone | 103 mg/m3 / 25 ppm | 309 mg/m3 / 75 ppm | Not Available | Sk |

EMERGENCY LIMITS

| Ingredient | Material name | TEEL-1 | TEEL-2 | TEEL-3 |
|------------------------|---|---------------|---------------|---------------|

| cyclohexanone | 5,000 ppm | 700 ppm |
| tetrahydrofuran | 20,000 [LEL] ppm | 2,000 [LEL] ppm |
| N-methyl-2-pyrrolidone | Not Available | Not Available |

Exposure controls

Appropriate engineering controls

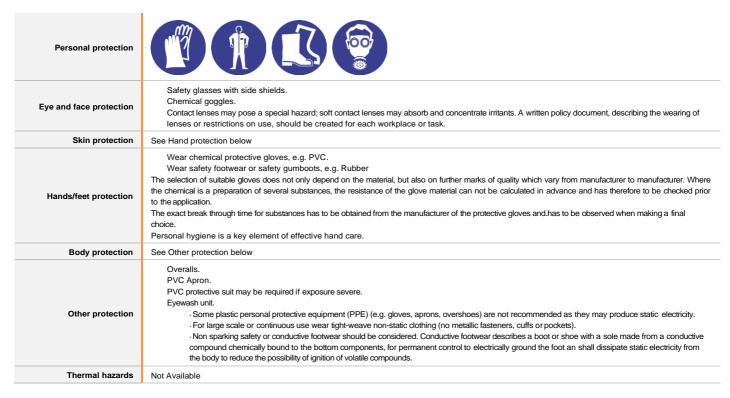

Engineering controls are used to remove a hazard or place a barrier between the worker and the hazard. Well-designed engineering controls can be highly effective in protecting workers and will typically be independent of worker interactions to provide this high level of protection.

The basic types of engineering controls are:

Process controls which involve changing the way a job activity or process is done to reduce the risk.

Enclosure and/or isolation of emission source which keeps a selected hazard "physically" away from the worker and ventilation that strategically "adds" and "removes" air in the work environment.

Print Date: 09/12/2016

Recommended material(s)

Version No. 2.1.1.1

GLOVE SELECTION INDEX

Glove selection is based on a modified presentation of the:

"Forsberg Clothing Performance Index".

The effect(s) of the following substance(s) are taken into account in the *computer-generated* selection:

SOUDAL TYPE P GREEN SOLVENT CEMENT

| Material | PI |
|-------------------|----|
| PE/EVAL/PE | A |
| BUTYL | С |
| BUTYL/NEOPRENE | С |
| CPE | С |
| HYPALON | С |
| NATURAL RUBBER | С |
| NATURAL+NEOPRENE | С |
| NEOPRENE | С |
| NEOPRENE/NATURAL | С |
| NITRILE | С |
| NITRILE+PVC | С |
| PVA | С |
| PVC | С |
| SARANEX-23 | С |
| TEFLON | С |
| VITON/CHLOROBUTYL | С |
| VITON/NEOPRENE | С |

* PI - Performance Index A: Best

Selection

B: Satisfactory; may degrade after 4 hours continuous immersion

C: Poor to Dangerous Choice for other than short term immersion

NOTE: As a series of factors will influence the actual performance of the glove, a final selection must be based on detailed observation. -

* Where the glove is to be used on a short term, casual or infrequent basis, factors such as "feel" or convenience (e.g. disposability), may dictate a choice of gloves which might otherwise be unsuitable following long-term or frequent use. A qualified practitioner should be consulted.

Respiratory protection

Type AK Filter of sufficient capacity. (AS/NZS 1716 & 1715, EN 143:2000 & 149:2001, ANSI Z88 or national equivalent)

Where the concentration of gas/particulates in the breathing zone, approaches or exceeds the "Exposure Standard" (or ES), respiratory protection is required.

Degree of protection varies with both face-piece and Class of filter; the nature of protection varies with Type of filter.

| Required Minimum Protection Factor | Half-Face Respirator | Full-Face Respirator | Powered Air Respirator |
|---------------------------------------|-------------------------|-------------------------|---------------------------|
| up to 5 x ES | AK-AUS / Class 1 | - | AK-PAPR-AUS / Class 1 |
| up to 25 x ES | Air-line* | AK-2 | AK-PAPR-2 |
| up to 50 x ES | - | AK-3 | - |
| 50+ x ES | - | Air-line** | - |

^ - Full-face

A(All classes) = Organic vapours, B AUS or B1 = Acid gasses, B2 = Acid gas or hydrogen cyanide(HCN), B3 = Acid gas or hydrogen cyanide(HCN), E = Sulfur dioxide(SO2), G = Agricultural chemicals, K = Ammonia(NH3), Hg = Mercury, NO = Oxides of nitrogen, MB = Methyl bromide, AX = Low boiling point organic compounds(below 65 degC)

Cartridge respirators should never be used for emergency ingress or in areas of unknown vapour concentrations or oxygen content. The wearer must be warned to leave the contaminated area immediately on detecting any odours through the respirator. The odour may indicate that the mask is not functioning properly, that the vapour concentration is too high, or that the mask is not properly fitted. Because of these limitations, only restricted use of cartridge respirators is considered appropriate.

SECTION 9 PHYSICAL AND CHEMICAL PROPERTIES

Information on basic physical and chemical properties

Appearance

Green viscous highly flammable liquid with a characteristic odour of MEK; does not mix with water.

SODUAL TYPE P GREEN SOLVENT CEMENT

Issue Date: **03/10/2016**Print Date: **09/12/2016**

| Physical state | Liquid | Relative density (Water = 1) | 0.94 |
|--|-------------------|---|----------------|
| Odour | Not Available | Partition coefficient n-octanol / water | Not Available |
| Odour threshold | Not Available | Auto-ignition temperature (°C) | 321 |
| pH (as supplied) | Not Applicable | Decomposition temperature | Not Available |
| Melting point / freezing point (°C) | Not Available | Viscosity (cSt) | 900-1100 cps |
| Initial boiling point and boiling range (°C) | Not Available | Molecular weight (g/mol) | Not Applicable |

| Upper Explosive Limit (%) | 2 | Surface Tension (dyn/cm or mN/m) | Not Available |
| Lower Explosive Limit (%) | 11.8 | Volatile Component (%vol) | Not Available |
| Vapour pressure (kPa) | Not Available | Gas group | Not Available |
| Solubility in water (g/L) | Immiscible | pH as a solution (1%) | Not Applicable |
| Vapour density (Air = 1) | Not Available | VOC g/L | Not Available |

SECTION 10 STABILITY AND REACTIVITY

| Reactivity | See section 7 |
|------------------------------------|--|
| Chemical stability | Unstable in the presence of incompatible materials. Product is considered stable. Hazardous polymerisation will not occur. |
| Possibility of hazardous reactions | See section 7 |
| Conditions to avoid | See section 7 |
| Incompatible materials | See section 7 |
| Hazardous decomposition products | See section 5 |

SECTION 11 TOXICOLOGICAL INFORMATION

Information on toxicological effects

| Inhaled | Inhalation of vapours or aerosols (mists, fumes), generated by the material during the course of normal handling, may be harmful. The material can cause respiratory irritation in some persons. The body's response to such irritation can cause further lung damage. Inhalation of vapours may cause drowsiness and dizziness. This may be accompanied by sleepiness, reduced alertness, loss of reflexes, lack of co-ordination, and vertigo. |
|--------------|---|
| Ingestion | Accidental ingestion of the material may be harmful; animal experiments indicate that ingestion of less than 150 gram may be fatal or may produce serious damage to the health of the individual. Swallowing of the liquid may cause aspiration into the lungs with the risk of chemical pneumonitis; serious consequences may result. (ICSC13733) |
| Skin Contact | Skin contact with the material may be harmful; systemic effects may result following absorption. Repeated exposure may cause skin cracking, flaking or drying following normal handling and use. Open cuts, abraded or irritated skin should not be exposed to this material Entry into the blood-stream, through, for example, cuts, abrasions or lesions, may produce systemic injury with harmful effects. Examine the skin prior to the use of the material and ensure that any external damage is suitably protected. The material may cause severe inflammation of the skin either following direct contact or after a delay of some time. Repeated exposure can cause contact dermatitis which is characterised by redness, swelling and blistering. |
| Eye | There is evidence that material may produce eye irritation in some persons and produce eye damage 24 hours or more after instillation. Severe inflammation may be expected with pain. |
| Chronic | Long-term exposure to respiratory irritants may result in disease of the airways involving difficult breathing and related systemic problems. Ample evidence exists, from results in experimentation, that developmental disorders are directly caused by human exposure to the material. Prolonged or repeated skin contact may cause drying with cracking, irritation and possible dermatitis following. There has been some concern that this material can cause cancer or mutations but there is not enough data to make an assessment. Substance accumulation, in the human body, may occur and may cause some concern following repeated or long-term occupational exposure. The teratogenic potential, subchronic and long term inhalation toxicity of N-methyl-2-pyrrolidone (NMP has been studied in rats. No evidence of nephrotoxicity was seen. No carcinogenic effects were observed. Very high doses are embryotoxic to rats and mice. Reproductive effects have been reported in animals. Long term cyclohexanone exposure may cause liver and kidney changes. Clouding of the eye lens and cataract development may occur. Limited information is available on the chronic (long-term) effects of methyl ethyl ketone in humans. Chronic inhalation studies in animals have reported slight neurological, liver, kidney, and respiratory effects. No information is available on the developmental, reproductive, or carcinogenic effects of methyl ethyl ketone in humans. Developmental effects, including decreased foetal weight and foetal malformations, have been reported in mice and rats exposed to methyl ethyl ketone via inhalation and ingestion. Repeated exposure to tetrahydrofuran (THF) and related compounds has been associated with liver inflammation and fatty degeneration of the liver. Animal testing suggests that this group of compounds can cause liver damage, irritation of the skin and airway, metabolic imbalance, gynaecological disturbance, damage to the adrenal glands and may increase the rate of cancer. Cyclic ethers can cause cancers, especially of |

| N-methyl-2-pyrrolidone | EC50 | 48 | Crustacea | ca.4897mg/L | 1 |
| N-methyl-2-pyrrolidone | EC50 | 72 | Algae or other aquatic plants | >500mg/L | 1 |
| N-methyl-2-pyrrolidone | EC50 | 384 | Crustacea | 133.481mg/L | 3 |
| N-methyl-2-pyrrolidone | NOEC | 504 | Crustacea | 12.5mg/L | 2 |

DO NOT discharge into sewer or waterways.

Persistence and degradability

| · · · · · · · · · · · · · · · · · · · | | | |
|---------------------------------------|---------------------------|------------------------------|--|
| Ingredient | Persistence: Water/Soil | Persistence: Air | |
| methyl ethyl ketone | LOW (Half-life = 14 days) | LOW (Half-life = 26.75 days) | |
| cyclohexanone | LOW | LOW | |
| tetrahydrofuran | LOW | LOW | |
| N-methyl-2-pyrrolidone | LOW | LOW | |

Bioaccumulative potential

| Dioaccamalative potential | Source manufacture potential | |
|---------------------------|------------------------------|--|
| Ingredient | Bioaccumulation | |
| methyl ethyl ketone | LOW (LogKOW = 0.29) | |
| cyclohexanone | LOW (BCF = 2.45) | |
| tetrahydrofuran | LOW (LogKOW = 0.46) | |
| N-methyl-2-pyrrolidone | LOW (BCF = 0.16) | |

Mobility in soil

| Ingredient | Mobility |
|------------------------|----------------------|
| methyl ethyl ketone | MEDIUM (KOC = 3.827) |
| cyclohexanone | LOW (KOC = 15.15) |
| tetrahydrofuran | LOW (KOC = 4.881) |
| N-methyl-2-pyrrolidone | LOW (KOC = 20.94) |

SECTION 13 DISPOSAL CONSIDERATIONS

Waste treatment methods

- ▶ Containers may still present a chemical hazard/ danger when empty.
- ▶ Return to supplier for reuse/ recycling if possible.

Otherwise:

If container can not be cleaned sufficiently well to ensure that residuals do not remain or if the container cannot be used to store the same product, then puncture containers, to prevent re-use, and bury at an authorised landfill.

▶ Where possible retain label warnings and SDS and observe all notices pertaining to the product.

Product / Packaging disposal

Legislation addressing waste disposal requirements may differ by country, state and/ or territory. Each user must refer to laws operating in their area. In some areas, certain wastes must be tracked.

A Hierarchy of Controls seems to be common - the user should investigate:

- Reduction
- ▶ Reuse
- ReuseRecycling
- ▶ Disposal (if all else fails)

This material may be recycled if unused, or if it has not been contaminated so as to make it unsuitable for its intended use.

- ▶ DO NOT allow wash water from cleaning or process equipment to enter drains.
- It may be necessary to collect all wash water for treatment before disposal.
- ▶ In all cases disposal to sewer may be subject to local laws and regulations and these should be considered first.
- ▶ Where in doubt contact the responsible authority.
- Recycle wherever possible.
- ► Consult manufacturer for recycling options or consult local or regional waste management authority for disposal if no suitable treatment or disposal facility can be identified.
- ▶ Dispose of by: burial in a land-fill specifically licenced to accept chemical and / or pharmaceutical wastes or Incineration in a licenced apparatus (after admixture with suitable combustible material).
- ▶ Decontaminate empty containers.

SECTION 14 TRANSPORT INFORMATION

Labels Required

| Marine Pollutant | NO |
|------------------|-----|
| HAZCHEM | •3\ |

Land transport (ADG)

| UN number | 1133 | | |
|------------------------------|---|--|--|
| UN proper shipping name | ADHESIVES containing flammable liquid | | |
| Transport hazard class(es) | Class 3 Subrisk Not Applicable | | |
| Packing group | II | | |
| Environmental hazard | Not Applicable | | |
| Special precautions for user | Special provisions Not Applicable Limited quantity 5 L | | |

Air transport (ICAO-IATA / DGR)

| • • | • | | | |
|------------------------------|---------------------------------------|---------------------------------------|------|--|
| UN number | 1133 | | | |
| UN proper shipping name | Adhesives containing flammable liquid | | | |
| Transport hazard class(es) | ICAO/IATA Class | 3 Not Applicable | | |

Special precautions for user

| EMS Number | F-E, S-D |
|--------------------|----------------|
| Special provisions | Not Applicable |
| Limited Quantities | 5 L |

Transport in bulk according to Annex II of MARPOL and the IBC code

Not Applicable

SECTION 15 REGULATORY INFORMATION

Safety, health and environmental regulations / legislation specific for the substance or mixture

METHYL ETHYL KETONE(78-93-3) IS FOUND ON THE FOLLOWING REGULATORY LISTS

Australia Exposure Standards Australia Inventory of Chemical Substances (AICS)

Australia Hazardous Substances Information System - Consolidated Lists

CYCLOHEXANONE(108-94-1) IS FOUND ON THE FOLLOWING REGULATORY LISTS

Australia Exposure Standards

Australia Inventory of Chemical Substances (AICS)

Australia Hazardous Substances Information System - Consolidated Lists

International Agency for Research on Cancer (IARC) - Agents Classified by the IARC

Monographs

TETRAHYDROFURAN(109-99-9) IS FOUND ON THE FOLLOWING REGULATORY LISTS

Australia Exposure Standards Australia Inventory of Chemical Substances (AICS)

Australia Hazardous Substances Information System - Consolidated Lists

N-METHYL-2-PYRROLIDONE(872-50-4) IS FOUND ON THE FOLLOWING REGULATORY LISTS

Australia Exposure Standards Australia Inventory of Chemical Substances (AICS)

Australia Hazardous Substances Information System - Consolidated Lists

| National Inventory | Status |
|----------------------------------|---|
| Australia - AICS | Y |
| Canada - DSL | Y |
| Canada - NDSL | N (cyclohexanone; N-methyl-2-pyrrolidone; tetrahydrofuran; methyl ethyl ketone) |
| China - IECSC | Y |
| Europe - EINEC / ELINCS / NLP | Y |
| Japan - ENCS | Y |
| Korea - KECI | Y |
| New Zealand - NZIoC | Y |
| Philippines - PICCS | Y |
| USA - TSCA | Υ |
| Legend: | Y = All ingredients are on the inventory N = Not determined or one or more ingredients are not on the inventory and are not exempt from listing(see specific ingredients in brackets) |

SECTION 16 OTHER INFORMATION

Other information

Ingredients with multiple cas numbers

| Name | CAS No |
|------------------------|----------------------|
| N-methyl-2-pyrrolidone | 872-50-4, 26138-58-9 |

Classification of the preparation and its individual components has drawn on official and authoritative sources using available literature references.

The SDS is a Hazard Communication tool and should be used to assist in the Risk Assessment. Many factors determine whether the reported Hazards are Risks in the workplace or other settings. Risks may be determined by reference to Exposures Scenarios. Scale of use, frequency of use and current or available engineering controls must be considered.

Definitions and abbreviations

STEL: Permissible Concentration-Short Term Exposure Limit IARC:

International Agency for Research on Cancer

ACGIH: American Conference of Governmental Industrial Hygienists

STEL: Short Term Exposure Limit

TEEL: Temporary Emergency Exposure Limit。

IDLH: Immediately Dangerous to Life or Health Concentrations

OSF: Odour Safety Factor

NOAEL :No Observed Adverse Effect Level

LOAEL: Lowest Observed Adverse Effect Level

TLV: Threshold Limit Value LOD: Limit Of Detection

OTV: Odour Threshold Value
